## Frequently Asked Questions

### **Are the messages stored in plain text in the contract?**

Yes, all messages are stored as plain text in the contract but æpp rendering display would be different depending on the message content.

### **Is there any security measure that protects our privacy?**

Yes, all contract state object are mapped using an æternity wallet address(Where the address account/user utilizing the contract).

### **How do I edit my profile?**

The æpp makes use of your current Superhero.com profile details to register you on the æpp. Our future update would include a feature to update your profile details soon.

### **Can I send tokens to a friend?**

Yes, you can send tokens to a friend as this is one of the core functionality that makes Superchat unique.

### **Why should I use AEchat?**

Aside being able to send AE tokens to friends that reduces error in sending tokens, your account is safe from hacks provided your account private key and seed phrase is kept secretly.

## Third Party Reviews

- Yeah... what if you can send tokens to human readable address(More like having ur name as an address).
- You might also consider how it can surpass WhatsApp or telegram(Why should I leave telegram or WhatsApp for Aechat).
- The interface is cool, we can start using it for Ambassadors, still look how it can be better, the interface is cool, design too! But let's have more!
- To be honest not a priority for now but yes it is important(It depends on adoption)
- Chat might be good use case. Is there also a project called chaet?
- I think it is an ok use case. The æpp looks great.
- I think it serves the purpose...just refined and make it popular in the æ community
