

Amaka Suggestion						
Item	Overview			Pros	Cons	
A system that verifies the user receiving token	This is good idea just like a bank alert notifying the user of an alert. And am suggesting that can we do something like without being on the superhero platform and somebody has already sent us a token can we receive a notification maybe via the email .			it makes you get notification faster	There isnt	
Issues around the current blockchain space	I personally feel its not fast enough that there isn't sufficient amount of speed and it is not suitable for large scale applications. And no medium to interact with each other (interoperability) which we have already stated as a suggested above.			This is good because we will be tackling problems surrounding it	None	
Sermon Jotting æpp	This is also a nice idea and a unique one but I don't know how we are going to make it into a dæp . if we all work together and analyze it.			It reduces hard copy like (books), pen which are easily misplaceable	It is one sided we should think of something useful for everyone regardless of their religion	
Jotting notes on the Superhero rooms	This is also a nice idea. If we can also even save the notes for reference purposes , it will be more nice .			Serves as a reference method to go back to what you have learnt or researched on	None	
A marketplace for freelance writers	This is a good idea as you can find potential writers and be able to pick your desired one so far they are both given a medium where they can discuss what the owner wants so there won't be a misunderstanding. I think this is a great idea..			The pros is that you get to work preferred time just like a take with you office.	The cons is that sometimes they might be trust issues . But that shouldn't be a major problem.	
Chating system with group functionalities	I would say this is the most engaging one but will require a lot of work if we can pull this through.			you can meet like minds and is a fast way of easy communication	None	
Saving system on the Superhero platform	This suggestion is actually nice, for those who wants to save their æ but I have a question will there be interest as they are saving or not.			Another way of saving up. and a plus is that if there is interest a lot of people will participate in that	None	

A trading system		This suggestion was brought up because instead of looking for æ traders can't it be directly transferred to our account like every other online transactions that take place. If this can come to light it will be so easy and reliable for users to use . But the cons is that if not pulled through perfectly there might be an unsuccessful or failed transaction and bringing to loss of æ.		Easy withdrawal with ease		Transaction problem
Simple and Fun Game		This is a fun task and will be more engaging no matter the reward it is as far as the consumer/ people are getting something at the end of it.		Engaging and makes the superhero platform active		None
AE as a pament method		This is a nice idea from there æ will also have a high rate.		Making ae more relevant		not everyone will like to use it

JET Suggestion									
Item		Overview		Pros		Cons			
A system that verifies the user receiving token		This type of system if I understand the idea well is a notification system, that informs a tipper if a tip has been claimed, if this is it this feature is already on the Superhero Wallet		It's get's the tipper informed		None			
Issues around the current blockchain space		I think the issues needs to be pointed out in other to know what to solve and how to go about solving the issue.		None as issue was not specifically known		None as issue was not specifically known			
Sermon Jotting æpp		A sermon jotting æpp with autocompletion feature would be great for the christain community		Helps christain to write fasters in sermons		Not a good fit for a Defi æpp and it limits usages to Christains alone unless other religion autocompletion could be added			
Jotting notes on the Superhero rooms		This is a cool idea for the Jisti platform		Helps write out important keywords/notes from the held session		Just as the Sermon Jotting æpp not a good fit for a Defi æpp and I think if we are to work on it since it is an opensource project it is outside the Hæck scope			
A marketplace for freelance writers		This is also a cool idea that I think can go beyond writers alone, it can be a platform that enhances the features of Medium. It could have a feature that upvotes users writeups with AEtken but the question is how is it diffrent from the Superhero Tip feature itself		It would be a community to get amazing writers		Limiting to writers alone			
Chating system with group functionalities		Personally I love this idea as it would bring more activity on the Superhero platform.		It enhances communication on the Superhero platform and sending tokens to a friend could be done easily which would reduce errors to lossing funds		Adoption			
Saving system on the Superhero platform		Personally I feel this has been made possible with the Wallet already unless an account would have a feature that allows the creation of sub accounts that would be used to save token a user want to keep		It promotes hodl		None			

A trading system		A trading system on the Superhero platform is not a bad idea but I think it would change the motives of the initial development of wanting their technology and tokens alone on the platform. And for fiat conversion, I think showing the equivalent amount is great already. Note this platform would be great outside of the Superhero Platform		Helps conversions of tokens to either another currency or fiat.		None
Simple and Fun Game		A fun game would be interesting as well but it must have a way of rewarding its users to make it a Defi æpp. An example of such game would be a how to use Superhero in a fun way		Promotes Superhero		Might piss off some users
AE as a payment method		This idea is what I think all Defi æpp is in one way promoting. Being able to use the AE token in daily activities		Increases the value and adoption of AE		Adoption and user error

Norniola Suggestion						
Item	Overview			Pros		Cons
A system that verifies the user receiving token	Token-based authentication is a protocol which allows users to verify their identity, and in return receive a unique access token. During the life of the token, users then access the website or app that the token has been issued for, rather than having to re-enter credentials each time they go back to the same webpage, app, or any resource protected with that same token.			Nill		Nill
Issues around the current blockchain space	(a).Blockchain relies on encryption to provide its security as well as establish consensus over a distributed network (b).Due to the lack of regulatory oversight, scams and market manipulation are commonplace. (C). Despite the huge interest in adopting blockchain technology from the established financial industry, the subtext behind much of what is said about it is "it would probably be better if it just quietly disappeared."			Nill		Nill
Sermon Jotting æpp	Sermon notes are passed out, providing a place to jot down thoughts which would be uploaded on a digital version of your sermon notes - right inside your app and you get upvote one it.			Most religious people will find it more useful		Really doesn't add much fo the Defi table of needs
Jotting notes on the Superhero rooms	For the once on the superhero Room it will make more sense it comment can be accepted			Sure more efficient to use		Nill
A marketplace for freelance writers	This is a super idea think of it as a content article writing and getting paid with æ.			Not a bad idea		Has limit
Chating system with group functionalities	Every interest of every man is to have some else to talk to either far or near, so having this blended into the app or web would make even more heads.			Community interaction		Nill

Saving system on the Superhero platform		Saving is an essential part of life that we can't ignore, so saving on the crypto platform with the addition of getting more returns from saving not necessarily investing for anything.		There is the awareness and promotion use.		Nil
A trading system		Trading apps are quiet much but having this feature on the superhero app would save the extra cost transfer charges to another app for trading.		Quick actions take place		if wrong during transaction, may not be easy to recover
Simple and Fun Game		That's the best idea ever where you can play and win even if it's word Puzzle or Colour mixing pattern game. Within all this embedded in the app makes life easy and fun		increase awareness of the use of superhero		Nil
AE as a pament method		Take an instance where you have more crypto of AE in your wallet and you are limited with cash at that moment you can do your market shopping and pay with your AE without leaving the shopping store So traders would be happy you are paying with a via crypto.		Create its relevance among the crypto world		Some may ignore the usefulness of it.

Tosin Suggestion									
Item		Overview			Pros			Cons	
A system that verifies the user receiving token		it is a very nice idea it will allow people to know when they receive a particular token.			the idea is cool and it will be very useful.			if we are to be getting notified wont there be charges involved	
Issues around the current blockchain space		the idea is cool and i think it will solve many problems			i'm in for this i support this because it will help in a very big way.			i dont think i have any cons for this.	
Sermon Jotting æpp		it will be very help for those that dont bring jotters and bible to church.			it will help people in churches especuallly those that rush to church forgetting their bible and jotter			but i think we have different application where you can jot on your phone including bible applications. it will be for those going to churches alone what about other religion?	
Jotting notes on the Superhero rooms		it will be really heplful for those that want to take note during video calls			it is will really be nice to have this on superhero.			i dont have cons	
A marketplace for freelance writers		:it serves as a good source of income for only writers.			it serves as a source of income for people			it only benefit writer, what about those that dont write?	
Chating system with group functionalities		It will be fun and enjoyable for those using superhero, passing of messages will be easy			it will make communication very easy			none	
Saving system on the Superhero platform		the idea is cool and helps people to be prudent in spending their aes			it helps people to save for future			none	
A trading system		it will actually be very nice to trade on superhero.			it is really nice			but not all traders are familiar with internet	
Simple and Fun Game		i really love this idea it will make people use the superhero very well because money is involved and it can serve as stress reliever.			i think it is very nice since many people love games is very recreative and people can get tips also, it will attract more people to use superhero			none	
AE as a pament method		I think this idea is very cool but we have to think about those that are not computer literate.			it will be a very nice idea			none	

Yinka Suggestion									
Item		Overview		Pros		Cons			
A system that verifies the user receiving token		The idea is okay provided it's functionalities are extensible		Make it easier for users to know when they've received a token and It can be an easily extended app that makes it easy for user to setup automations when they receive a token: mail or sms notification		Wallaets shows the balance of any account at any time			
Issues around the current blockchain space									
Sermon Jotting æpp		NII		NII		There are more than enough note taking app already			
Jotting notes on the Superhero rooms		NII		Make it easier to note important stuffs without leaving superhero and notes can be shared between users for collaboration		NII			
A marketplace for freelance writers		NII		A simple way of solving trust issues between clients and writers and solves the issue of fund clearance for writers, e.g. Paypal barring Nigerians from using its platform		Adoption			
Chating system with group functionalities		NII		A decentralised chatting app that is censor-free and private		NII			
Saving system on the Superhero platform		NII		Nice idea but would be better if it is not locked with/in SuperHero and would be lucrative and attract users if there is a reward for saving		NII			
A trading system		NII		NII		NII			
Simple and Fun Game		I think the daepp should be detached from SuperHero. Nice concept		I beleive such game (if engaging) would help increase the adoption of blockchain		NII			
AE as a pament method		Making a AE payment entity would surely drive up the use of AE and the adoption of its ecosystem		Nice concept. Aeternity is fast, hence there won't be delay in sending and receiving payment		Adoption
